

Stylish packaging that preserves moisture and fragrance

Suominen Flexibles ensures that your wet wipe packaging will always make the best impression. Our laminated films seal in moisture and fragrance – guaranteeing that your products reach the customer in prime condition.

- Baby wipes
- Cosmetics wipes
- Personal care wipes
- Household wipes

Innovative packaging solutions for wet wipes

Attractive and durable lamination

Thanks to our numerous material, coating, and colour options, you can easily customize your wet wipe packages to achieve a unique look that really captures the shopper's attention. The shiny, bright outer layer attached to the multilayer film highlights the printed image while protecting it against mechanical wear and tear and chemical damage. You can use our films for both flowpack and sachet packages.

Select the film in either transparent or white. High-quality flexographic sandwich printing in up to ten colours makes even most challenging art work possible. Thanks to our new printing technology, we can achieve even finer resolution and thus significantly better printing quality than ever before.

Best way to preserve moisture and fragrance

Our EVOH film is ideal for strong perfumes. It gives the package excellent barrier properties, effectively preserving the moisture and fragrance of the products. Furthermore, the wide sealing window ensures excellent sealing properties.

Our thin-wall multilayer films are also more environmentally efficient because they need less raw material. Yet they still enable you to operate your high-speed lines at high capacity utilisation levels.

Multipacks increase sales

Multipacks are ideal for boosting your extra sales. You can differentiate your product from the competitors by creatively combining different materials, coatings, and colours. For example, AmerSoft™ matt film gives the package a silky smooth texture. You can also create attractive campaigns with stickers and AmerPromo™ coding.

Technical specifications

Laminated films for wet wipes

- Materials:
 - BOPP with coex PE or PEP (EVOH)
 - PET with coex PE or PEP (EVOH)
 - Met PET with coex PE or PEP (EVOH)
