

PHOTOVOLTAIC SOLAR INSTALLATION

In order to be more sustainable, improve the efficiency of our facilities and reduce energy costs, at ALICANTE NONWOVENS we are committed to incorporating renewable energy sources, in this case carrying out a photovoltaic solar installation for self-consumption installed on the ground.

The new photovoltaic solar installation is a clear commitment to the environment and the generation of renewable energy, which is also allowing us significant financial savings, especially given the rise in the price of electricity. This installation allows us to: reduce the costs corresponding to the consumption of electrical energy, improve the energy efficiency of our facilities and make them more sustainable, thus reducing CO₂ emissions into the atmosphere.

The project has been possible thanks to the aid granted of €110,420.34 from the IVACE (Valencian Institute of Business Competitiveness) in its IDAE SELF-CONSUMO Facilities program. This aid is financed by the European Union through the Next Generation EU European Recovery Fund, within the framework of the Recovery, Transformation and Resilience Plan, promoted by the Ministry for the Ecological Transition and the Demographic Challenge.
